

Recent Progress In Changchun Laser Ranging Station (CHAL/7237)

关博文

The Changchun station (CHAL/7237) has finished a series of upgrades. The ranging control software now supports 2 kHz repetition rate. The range-gate generator(RGG) has upgraded to a new model, to decouple from old type computer mother-board interface. New laser was installed for routine observation. Data processing software is adapted to support new version of prediction and ranging data formats.
